BACKEND DEVELOPER | DEVOPS ENGINEER

PROFESSIONAL SUMMARY

Backend Developer / DevOps Engineer with 6+ years of experience in Python backend development, REST API development, Azure cloud, CI/CD, application deployment, monitoring, troubleshooting, and performance optimization.

Strong experience in Python, Django, Django REST Framework, Celery, Redis, Azure App Service, GitHub Actions, Application Insights, Managed Identity, SQL Server, and MySQL. Experienced in healthcare and e-commerce applications, production support, and application performance improvement, with familiarity in AI-assisted development using ChatGPT and Claude.

TECHNICAL SKILLS

Languages: Python

Backend: Django, Django REST Framework, REST APIs, Django ORM

Cloud & DevOps: Azure, Azure App Service, GitHub Actions, CI/CD, Application Insights, Managed Identity

Databases: SQL Server, MySQL

Tools: Git, JIRA, Postman, Linux, Kudu, Log Stream

Others: Celery, Redis, Locust, WebSocket, Third-Party API Integration, Stripe

AI Tools: ChatGPT, Claude

Methodology: Agile, Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer / DevOps Engineer

Oct 2023 – Present

OG Healthcare, Bangalore

- Develop and maintain backend applications using Python, Django, DRF, Celery, and Redis.
- Deploy and manage healthcare applications on Azure App Service using GitHub Actions CI/CD pipelines.
- Configure application settings, environment variables, and Azure resources; implement Managed Identity for secure access.
- Monitor and troubleshoot using Application Insights, Log Stream, Kudu, and Azure diagnostics.
- Work on API and database performance optimization, and application security improvements.
- Support healthcare applications including SuperApp, DrugAssist, eSuite, and XR-Messaging.

Environment: Python, Django, DRF, Celery, Redis, Azure, Azure App Service, GitHub Actions, Application Insights, Managed Identity, SQL Server, Git, Linux

PROJECTS – OG HEALTHCARE

eSuite – ATS & HRMS

Role: Backend Developer / DevOps Engineer

Technology: Python, Django, Django REST Framework, SQL Server, Angular, Celery, Redis, Azure App Service, GitHub Actions

eSuite is an Applicant Tracking System (ATS) and Human Resource Management System (HRMS) used to manage candidate registration, job applications, interviews, internal job postings, profile processing, and HR-related workflows.

- Developed backend features and REST APIs using Python, Django, and DRF.
- Worked on Candidate Registration, Application Tracking, Interview Management, and Internal Job Posting modules.
- Implemented asynchronous tasks and automated workflows (email, birthday cards, profile processing) using Celery and Redis.
- Implemented PDF report generation using PDFShift and integrated third-party APIs.
- Deployed the application on Azure App Service with GitHub Actions CI/CD.

ClientApp

Role: DevOps Engineer

Technology: Azure App Service, GitHub Actions, Application Insights, Managed Identity, SQL Server

ClientApp is a healthcare application supporting client-facing workflows and healthcare-related services.

- Managed application deployment to Azure App Service using GitHub Actions and configured CI/CD pipelines.
- Managed application settings, environment variables, and runtime configurations.
- Used Application Insights and Managed Identity for monitoring and secure Azure access.
- Investigated deployment, startup, API, and production issues; supported stability improvements.

DrugAssist

Role: DevOps Engineer

Technology: Azure App Service, GitHub Actions, Application Insights, Managed Identity, SQL Server

DrugAssist is a healthcare application that provides drug, assistance-program, eligibility, and related healthcare information to support client workflows.

- Deployed and supported the application on Azure App Service with GitHub Actions CI/CD.
- Monitored production applications using Application Insights and Azure diagnostics.
- Troubleshoot API failures, startup issues, memory utilization, and performance problems.
- Worked on API and database/query optimization; analyzed logs to identify root causes.

XR-Messaging

Role: DevOps Engineer

Technology: WebSocket, Azure App Service, GitHub Actions, Application Insights

XR-Messaging is a real-time messaging application designed to support real-time communication using WebSocket technology.

- Support deployment and configuration on Azure App Service using GitHub Actions.

- Support WebSocket-based real-time communication and monitor application behaviour using Application Insights.
- Troubleshoot deployment, runtime, connectivity, and production issues.

SOFTWARE DEVELOPER

Software Developer

Feb 2020 – Sep 2023

VVM Soft Solutions, Chennai

- Developed web applications and REST APIs using Python, Django, and Django REST Framework.
- Worked with MySQL, Django ORM, and Python database connectivity.
- Integrated third-party APIs and Stripe Payment Gateway.
- Fixed bugs, optimized application performance, and supported production issues using Git, JIRA, and Agile practices.

PROJECTS – VVM SOFT SOLUTIONS

JioGames

Role: Software Developer

Technology: Python, Django, Django REST Framework, Locust

JioGames provides gaming services for JioSIM-based feature phone subscribers and Android users over a trusted and managed LTE environment, including a test framework to simulate subscriber requests and perform performance testing.

- Developed APIs using Django REST Framework and web pages/user controls using Python and Django.
- Developed an admin panel for the testing tool and integrated the application with different servers.
- Used Locust to simulate subscriber requests and perform performance testing.
- Optimized code for scalability, maintainability, and readability.

E-Commerce Web Application

Role: Software Developer

Technology: Python, Django, MySQL, Django ORM, REST APIs, Stripe

An e-commerce web application that enables users to buy and sell physical goods, services, and digital products online, including order processing and payment-related functionality.

- Designed and developed web application functionality using Python and Django; developed REST APIs and business logic.
- Worked with MySQL database queries, Python database connectivity, and Django ORM.
- Integrated Stripe Payment Gateway; fixed bugs and supported application enhancements.

AI-ASSISTED DEVELOPMENT & SECURE AI USAGE

Tools: ChatGPT, Claude

- Use ChatGPT and Claude for code analysis, debugging, refactoring, optimization, documentation, and technical research.
- Follow secure AI usage practices by masking organizational secrets and sensitive information before using AI tools.
- Use sanitized code snippets and non-sensitive sample data when seeking AI assistance.
- Review and validate AI-generated code for security, correctness, performance, and coding standards before implementation.

EDUCATION

Bachelor of Science (B.Sc.)

2016 – 2019

Bangalore University
